

**IN THE CLAIMS:**

Please cancel claims 7 -14, without prejudice.

- 1           1.       (Currently Amended) A liquid feed fuel cell system comprising:  
2           (A)     a direct oxidation fuel cell including a membrane electrode assembly;  
3           (B)     a source of liquid fuel; and  
4           (C)     a fuel container coupled with said fuel cell, including:  
5                       (i)     a first inner bladder being substantially fully ex-  
6                       panded upon being filled with liquid fuel, and having a fuel outlet conduit  
7                       to supply liquid fuel to said direct oxidation fuel cell; and  
8                       (ii)    a second inner bladder for receiving effluent from  
9                       said fuel cell through an effluent inlet leading from said fuel cell into said  
10                      fuel container, said second inner bladder being disposed directly adjacent  
11                      to said first inner bladder such that as effluent is received from the fuel  
12                      cell, the second inner bladder expands displacing fuel from said first inner  
13                      bladder to deliver fuel to said fuel cell.
- 1           2.       (Original)     The liquid feed fuel cell system as defined in claim 1  
2           wherein said second inner bladder is coupled to an anode aspect of said fuel cell.
- 1           3.       (Original)     The liquid feed fuel cell system as defined in claim 1  
2           wherein said second inner bladder is coupled to a cathode aspect of said fuel cell.
- 1           4.       (Original)     The liquid feed fuel cell system as defined in claim 1, fur-  
2           ther comprising at least one force applying instrument which acts upon said first

3 inner bladder such that fuel contained in said first inner bladder is expressed  
4 through said outlet conduit toward said fuel cell.

1 5. (Original) The liquid feed fuel cell system in claim 1, further compris-  
2 ing at least one of a pump and a valve means associated with said fuel outlet con-  
3 duit to control the delivery of fuel to said fuel cell.

1 6. (Original) The liquid feed fuel cell system as defined in claim 1, fur-  
2 ther comprising at least one of a pump and a valve means associated with said ef-  
3 fluent inlet conduit to control the removal of effluent from said fuel cell.

1 7. - 14. Cancelled
